Kivora: AI-Powered Content Creator Marketplace

One-page solution overview | The Great Indian Internship Challenge by Gnani | Team: Shaik Arfa Anjum

The problem

Brands find it hard to pick the right AI creator. Normal freelance sites do not show which AI tools a creator uses, how the work was made, or whether the creator can deliver. Briefs are unclear, and applications, feedback and approvals are spread across many tools. Many creators and small brands also prefer to work in Telugu or Hindi, not only English.

Our solution

Kivora brings AI creators, brands and creative agencies onto **one platform**. Brands build clear briefs with AI help, find creators with smart matching and manage the work till final approval. Creators show their portfolios, tools and proof of workflow, find relevant campaigns and collaborate with brands. **Kivo**, our assistant, helps users by text and by **voice in Telugu, Hindi and English** using Gnani AI.

Discover	Define	Connect	Create
Brands explore creators, portfolios, skills and specializations.	Brands describe the campaign and the AI Brief Builder makes a structured brief.	Smart matching, applications and direct invitations link both sides.	Both sides manage deliverables, revisions and final approval.

Key features

For brands and agencies

- **Brand dashboard:** total briefs, pitches, active collaborations, completed work
- **AI Brief Builder:** objectives, audience, timeline, skills and AI tools into a structured brief
- **Draft and publish:** save a brief, edit it later, publish when ready
- **Creator discovery:** filters for category, skills, AI tools, budget, location, verification
- **Pitch review:** compare proposal, budget, timeline and fit
- **Collaboration workspace:** track progress, give feedback, approve final work

For AI creators

- **Profile and portfolio:** specializations, creative skills and projects
- **Campaign discovery:** browse and filter briefs, save briefs, get smart opportunities
- **AI-assisted pitch:** approach, deliverables, budget, timeline; track under My Applications
- **Direct invitations** from brands, plus **notifications and direct chat**
- **Deliverables and revisions:** submit work, get feedback, track progress to approval
- **Verification and proofs:** workflow evidence that an admin reviewer can audit

Voice assistant with Gnani AI

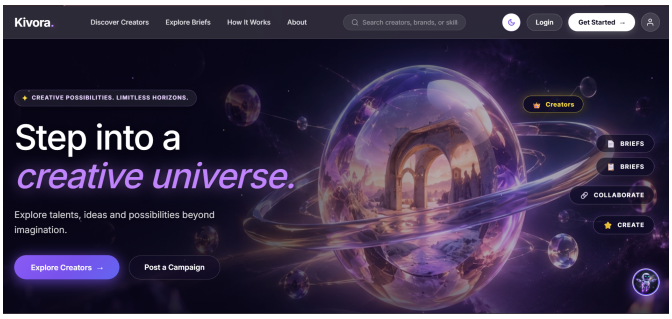

Users speak to Kivo in Telugu, Hindi or English and hear the reply spoken back. The text chat stays available next to voice.

User speech	Gnani Prisma speech to text	Kivo chat flow Kivora knowledge	Google Gemini reasoning	Gnani Timbre text to speech	Spoken reply

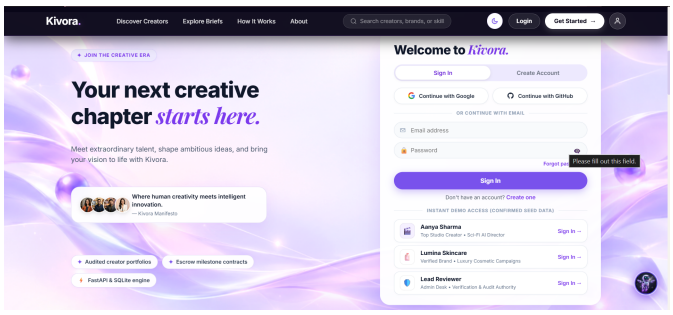

Tech stack

Frontend: React, Vite | **Backend:** Python, FastAPI, REST APIs | **Database:** SQLite with SQLAlchemy | **AI:** Google Gemini | **Voice:** Gnani Prisma and Timbre | **Auth:** email, Google, GitHub with role-based access | **Deploy:** Render. AI keys stay on the backend only.
